

# Pol-E-Scrim Polyester Reinforcing Roof Fabric.

POL-E-SCRIM is a woven polyester fabric with a non-woven polyester fabric bonded to the surface.

## Use as a Reinforcing Fabric for:

- Acrylic Coatings
- Smooth Roof Surfaces
- Cold Applied Asphalt Coatings
- Foundations
- Pipeline Joint Wraps

## Features and Benefits Include:

- High tensile and tear strength
- Wets out well with both cold applied cutbacks and emulsions
- Moisture, rot, and mildew resistant
- Lightweight
- Excellent repair fabric for new and reroof applications

**What is POL-E-SCRIM polyester roof fabric?** Pol-E-Scrim is a 5X5 - strands-per-inch polyester scrim with a thin layer of spun bonded polyester bonded to the top side. This is a special purpose polyester roofing fabric with tensile strength in both directions, plus elongation.

**How to use POL-E-SCRIM polyester roof fabric.** Pol-E-Scrim is applied over the entire field area of the roof. Start at the low (eave) side and shingle lap 2". Apply fabric over wet Vap-R-Lok and smooth out the fabric with a long-handle paint roller.
